

# Coronavirus Disease 2019 (COVID-19) Blood Donation/Drive Fact Sheet

**American  
Red Cross**

In response to Coronavirus Disease 2019 (COVID-19), government agencies recommend limiting social gatherings exceeding 10 people for non-essential activity. **It is very important to understand, that the American Red Cross mission IS an essential service, like hospitals, grocers, pharmacies, energy and transportation infrastructure, that remain in service as part of emergency response plans.** The need for blood is constant and patients continue to need lifesaving blood products.

**Following is guidance that blood drives are essential and blood donation must continue:**

It is safe to [#donateblood](#) and blood centers need healthy individuals to donate now to help others in need. Find a local blood center at [aabb.org/giveblood](http://aabb.org/giveblood) and make an appointment.

♥ 105 4:15 AM - Mar 20, 2020

“I want Americans to know that blood donation is safe and blood centers are taking extra precautions at this time based on new CDC recommendations, including spacing beds 6 ft apart, disinfecting surfaces between patients, temperature-checking staff, and encouraging donors to make appointments ahead of time so we can space them out. Social distancing does not have to mean social disengagement, so give blood today. You’ll feel good about it, and you’ll be helping your country and your community during this crisis, and you might even save a life.”

—**U.S. Surgeon General, Jerome Adams**, speaking at the White House, 3/19/20

The Surgeon General is right. What makes us most vulnerable in this challenging time is also our greatest strength—our humanity. In response to his public comments and those of other government agencies calling for blood donation to continue, the Red Cross has received an influx of donors seeking drives. Our current priority is finding suitable site locations to place blood drives nationwide. If you can share a site(s) that might be suitable, we can share lifesaving blood with the most vulnerable among us.

To express interest in serving as a site location, please visit <https://rcblood.org/impact>. We’re so grateful for your partnership!

## Safety Precautions at Our Drives

- Checking temperatures of staff and donors before entering a drive to make sure they are healthy.
- Providing hand sanitizer for use before the drive, as well as throughout the donation process.
- Following social distancing between donors including entry, donation and refreshment areas.
- Wearing face masks or coverings for both staff and donors.
- Routinely disinfecting surfaces, equipment and donor-touched areas.
- Wearing gloves, and changing gloves often.
- Using sterile collection sets and an aseptic scrub for every donation.

Each day, the American Red Cross assesses the need and opportunity for additional safety precautions. The health of our staff, volunteers and donors are every bit as important to us as that of the patients we serve daily.
